

- Draw a road or path segment by clicking on the map to add points. Click directly on the last point of your route to finish drawing. Sometimes this can be a little tricky since the points are small, so keep trying if you don't get it on the first click.

- In the survey window that pops up, select whether the route is for walking, biking, or both. Then complete the description of the route you just drew. Click **Upload a file** to share a photo (optional), and then click **Submit** to finish. (Items marked with * require a response.)
